

# Multiple efforts for even small-lot orders

*Deliveries to remote locations also possible*

O-BAN Co., Ltd. (Suita City, Osaka, President: Toko Osaki) has been highly evaluated by customers for a long time for its small-lot production of items processed from materials such as urethane foam and polyethylene foam. With the stated objectives of "ultra-short delivery periods," "small lots" and "high quality," the Company has now decided to start the full acceptance of orders for small lots starting from just one piece, including for orders from remote locations. O-BAN will also accept orders from other processing companies in the same business that are struggling with the processing of small orders and will process the small lots and also deliver them to remote locations. Furthermore, for cases when the factory of a client that trades with the Company is in a distant location, O-BAN has established a policy of OEM support.

O-BAN uses processing equipments such as a slicing machine, vertical cutting machine, super cutter, roll slitter, press, fully-automatic press, reciprocating

processing machine, ribbon type automatic 2D cutting machine and slitter to process foam materials such as urethane foam, polyethylene foam, rubber sponge, silicon sponge and EVA foam, and also performs processing using various soft materials in response to orders.

When another company in the business has a problem such as it cannot make a delivery on time, it does not have a particular machine, it does not have specific materials, it does not have a mold or it has no spare processing capacity, O-BAN can perform the shipment within same day, even for orders for just one piece. The Company policy is to give examples of the processed products possible such as 5S tools and tool cases and also circles and rings for packing for waterworks and gas, pipe covers, mobile phone covers, artificial leg covers and packing and to actively develop this business.
